Installation and Operation Manual - DOCR-060005 (Rev B) 2
1.0 DATA MONITORING SYSTEM OVERVIEW

SolrenView™ monitoring is a state-of-the-art data acquisition system (DAS) and is designed to interpret the signals from Solectria Renewables inverters and/or revenue grade metering system and send the information to the Solectria Renewables server for display on the internet (http://www.solrenview.com/). This is a subscription service for a period of 3 or 5 years, renewable at prevailing rates. Data is saved to Solectria Renewable servers for the life of the subscription plan, and the inverters history may be viewed or downloaded in CSV format to export to excel for the site owner to chart. The SolrenView DAS collects real-time data samples from inverters and pulse meters at 1-minute intervals. The data is then sent over the Internet to the SolrenView server when a connection can be established. Data samples received by the server are retrieved by the web server whenever a user queries the information with a browser.

This manual is written for external mounted SolrenView DAS units only; for commercial inverters 10kW and larger with built in display panels. Please review the inverter manual for installation and connection details.
2.0 Monitoring Options

2.1 Revenue Grade Monitoring
The SolrenView DAS is connected to the pulse output of a KYZ meter or RS485 from a Veris meter (CT). The DAS keeps count of the meter-triggered pulses to provide the cumulative kWh value. Solectria Renewables may also report the revenue grade totals to certain agencies for net metering reimbursement; this is an additional option if a customer chooses. Any brand of inverter can provide revenue grade metering.

2.2 Inverter Direct Monitoring
The SolrenView DAS is directly connected to the RS485 line of one Solectria Renewables inverter. 15 additional Solectria Renewables inverters can be connected to the line with ‘daisy-chain’ cables. Each device connected must have a unique ID number between 1 and 16. In the example on the next page, inverter PV#1 is directly connected to the monitor, while subsequent inverters (PV#2 onwards) are connected in series to each other. Inverters 10kW and larger with built-in display units cannot be daisy-chained. Please refer to the inverter manual for instructions.

2.3 Weather Station
The real-time weather package allows a customer to use an internet connection to retrieve information about the operation of their PV system via www.solrenview.com. The crucial environmental information provided with this option is: irradiance, ambient temperature, module temperature, wind speed and wind direction. Please refer to the weather station manual for details about this product.

2.4 Kiosk View
The web view is enabled with flash to be shown on a local monitor, usually in a lobby or classroom. This will scroll through several different photos and site information (provided by the customer) and includes a short tutorial about solar. This option is available with either revenue grade or Inverter Direct monitoring package.
A 6-foot inverter to SolrenView cable will be provided, as well as the inverter to inverter ‘daisy-chain’ cables to link two neighboring inverters together.
3.0 ORDERING INFORMATION

The SolrenView monitoring DAS is normally ordered through the solar system installer or distribution agent. Please contact one of our distributors for current pricing structure (please see: http://www.solren.com/distributors.html for a list of distributors). Monitoring contract renewals can be purchased directly from Solectria Renewables.

Solectria Renewables must program the SolrenView DAS for each installation. A site survey form must be completed and returned to Solectria Renewables prior to the shipment of the equipment (see Appendix C – SolrenView™ Site Survey).

The SolrenView DAS will ship with the electronic receiving and sending unit, power cable, cable from the unit to 1 inverter and if multiple inverters are monitoring daisy-chain cables for interconnections. For outdoor installations, weatherproof housing is required (this is optional if indoor installation).
4.0 **SYSTEM REQUIREMENTS**

To send the information to Solectria Renewables server, the SolrenView DAS requires a high speed internet connection. A CAT5 Ethernet cable connects the DAS to a router or other LAN device capable of providing an IP address. The WAN connects to an internet equipped device.

![LAN configuration diagram](image)

**Figure 2.1 LAN configuration**

4.1 **Wire/Cable Lengths**

The total wiring distance between two final endpoints of a network must not exceed 100 meters (328 ft). This rule applies to both the Ethernet (wire length from DAS to router/switch/modem) and RS485 (wire length from DAS to the last inverter of a daisy-chain) networks. The wires from the KYZ meter pulse outputs to the data monitor must not exceed 100 ft.

4.2 **Site Preparation**

The SolrenView DAS is designed for wall mounting and should be installed in an indoor location close to the inverter(s). A standard 120VAC outlet for the DAS power supply is required the power supply cable is 6 feet. For outdoor installations, weatherproof housing is required (this is optional if indoor installation).
**5.0 INSTALLING SOLRENVIEW**

It is recommended to install the SolrenView DAS module and attach all wiring prior to applying the power to the DAS.

**5.1 Inverter Direct Connections**

For one inverter, connect the RJ45 connector to the appropriate port inverter and the bare wire connections labeled A and B to the RS485A and RS485B connections on the SolrenView DAS.

For Inverter Models PVI1800 and PVI2500, the brown wire is to the RS485A and the Brown/white wire is to RS485B. For the PVI3000, PVI4000, PVI5000 and PVI5300, the brown wire is the RS485A and the green wire is the RS485B.

![Figure 4.1 PVI1800 and PVI2500 RS485 connections](image)

![Figure 4.2 PVI3000 through PVI5300 RS485 connections](image)
5.2 Connecting multiple inverters
Multiple inverters are connected from one to another using the cables supplied. If the distances between the inverters are greater than the standard cables, CAT5 cables may be used. If mixing PVI1800 or PVI2500 with any PVI3000-PVI5300, a hybrid cable must be used as the pin configurations are different. Up to 16 inverters may be connected to one SolrenView DAS. Each inverter must have a unique ID number between 1 and 16. If you received inverters with the same ID numbers, please contact Solectria Renewables for assistance (see Appendix B – Contact Information).

5.3 Revenue Grade Monitoring
A pulse type revenue grade meter is installed into the AC wiring between the inverter and the grid (please follow applicable codes). The following meters have been configured for use with the SolrenView DAS:

- For 3 phase AC service GE KV2c meter
- For single phase AC service the ABB FM2S

When installing the pulse meter, verify the inverter(s) AC line is wired to the top lugs (line) of the meter base and the building/utility is wired to the bottom lugs (load) of the meter base to enable correct forward counting. Connect pulse output of KYZ meter to the DAS. The Red wire to ‘K’, Yellow wire to ‘Y1’, in some instance the Black to ‘Z1’ to the terminal blocks on the SolrenView DAS. Extend pulse wires up to 100′ as needed.

The Veris meter “current transducer” (CT’s) is installed on 3-phase AC service. Connect to the DAS using the RS485 connections with the + from the meter to the RS485A and the – from the meter to the RS485B.

5.4 Ethernet Connection
With the SolrenView DAS installed and the inverter and/or revenue grade meter attached, the Ethernet cable can be attached to the Ethernet port. The SolrenView DAS can now have the power applied using the supplied AC adapter. The SolrenView DAS will perform a self test and can be verified by the power light, server light and device light all turn on and off twice. Once there is network activity, the LED’s near the Ethernet port on the data monitor will blink.

**Note: Blinking of the LEDs on the Ethernet port (green, orange) only indicates the existence of a physical connection. This does not guarantee that a successful outbound network connection if the logical IP configuration (DHCP or LAN gateway, etc) has not been configured properly.**
6.0 SOLRENVIEW OPERATION

6.1 Device Sensing
When power is applied to the SolrenView DAS, the unit will poll the connected devices for information once per minute. This can be verified as the device light will blink once per device every 60 seconds. For example, if there are 2 inverters, the device light will blink twice each minute. If there are 3 inverters and one revenue grade meter, the device light will blink 4 times. While the inverters are off they will not be recognized by the SolrenView DAS.

6.2 Internet connection
Following the device light blink indicating collecting the information from the devices, the server light will blink once to indicate the information has been sent to the internet for transmission to the Solectria Renewables server. If the server light does not blink, this is an indication the DAS does not have access to the internet (see troubleshooting).
7.0 **WEB VIEW**

Using any web enabled device the SolrenView site can be viewed via a direct a browser to: [http://www.solrenview.com](http://www.solrenview.com). Click on ‘Live Sites’ at the top of the page and a list of public system sites will be displayed sorted by installer. If your site isn’t listed yet, please call to check Solectria Renewables (see Appendix B) on the status of your site’s availability.

7.1 **Web page information**

Solectria Renewables designates several status indications as a quick visual for the site:

**Status Indications**

- **Active**: System is active (inverter/meter communicating)
- **Asleep**: System is not currently active, ie at night or during low sunlight levels
- **Inactive**: System has been asleep for almost a day
- **Offline**: System is not currently connected to the SolrenView server

During normal daylight hours the status indication should be green and “active”. The top line indicates the DAS is online and the last update time stamp. The server will update the view every 15 minutes. For kiosk view, the server will update at each full cycle.

Example of system status’

An inactive status indication is the result of the inverter(s) not communicating or the revenue grade meter not communicating.
7.2 Inverter Direct and Revenue Grade Displays

On the summary page, if Revenue Grade monitoring is selected as an option, the data shown under ‘Current System Status’ is calculated from the Revenue Grade meter.

![System Status Monitor](image)

If Revenue Grade monitoring is not selected, the system summary data is calculated from Inverter Direct data instead.

![System Status Monitor](image)

7.3 Inverter and Revenue Grade history data

To view logged data history, click on ‘View Inverter Direct’ or ‘View Revenue Grade’ link. The data log navigator is on the top left of the page.

![Data Log Navigator](image)

The day mode (default) will show the current day view. To move back one day select the single back arrow < to go back to the first day select the double back arrow <<. To return to the current day, select the forward arrow > or double forward arrow >>. By selecting week or month, the view will change accordingly. The back and forward arrows will step back either one week at each selection or one month.

On the top right, a list of data values can be selected for viewing.

![Data Log Values](image)
8.0 **ALARM/EVENT NOTIFICATIONS**

To be notified of system-related events, be sure to specify an e-mail address under the site survey/PO checklist. To get notification through SMS, the 10-digit phone number and service provider must be provided. For example: 978-123-1234 (T-Mobile)

**Table of Supported Events:**

<td>5. There is an IP address conflict.</td>
</tr>
</tbody>
</table>

9.1 Server Light not Flashing

If the SolrenView DAS is not connecting to the internet, verify the “server” light is flashing at least once per minute. If not flashing and the SolrenView is configured with DHCP “dynamic host configuration protocol”, it may have temporarily lost the connection and has selected the “fall back” IP address of 192.168.1.11, and this IP address is not compatible with your LAN. Using a browser window, enter the LAN IP address to see if the router can communicate with the DAS. The Ethernet cable must be attached prior to powering up the DAS.

If available, use a DHCP-enabled router or temporarily enable DHCP on an existing router to find the IP address of the data monitor by following these steps:
### 9.2 Find the LAN IP address of the SolrenView Data Monitor

Access and view the DHCP client list of your local DHCP server. Refer to your network admin and/or router manual for help. If the DHCP server is your router, open a web page to the router, usually [http://192.168.1.1](http://192.168.1.1) to find the DHCP client list. The serial number of the SolrenView DAS is the MAC address. Locate this number to compare with the DHCP client list. The MAC address format is 00:90:c2:XX-XX-XX.

The IP address of the data monitor should be displayed in the client entry.

**Example DHCP client list**

<table>
<thead>
<tr>
<th>Client Hostname</th>
<th>IP Address</th>
<th>MAC Address</th>
<th>Interface</th>
<th>Delete</th>
</tr>
</thead>
<tbody>
<tr>
<td>computer1</td>
<td>192.168.1.101</td>
<td>xx-xx-xx-xx-xx-xx</td>
<td>Ethernet</td>
<td></td>
</tr>
</tbody>
</table>

If the DHCP router drops the SolrenView DAS, or if there are address conflicts, it is recommended to set the DAS to a Static or fixed IP address. This can only be accomplished if you have the current LAN IP address and have a computer connected to the same network.

### 9.3 Setting a Static LAN IP Address

SolrenView DAS units shipping DHCP enabled have a "fall back" IP address of **192.168.1.11** and a subnet mask of **255.255.255.0**, the default gateway is **0.0.0.0** in the event that DHCP fails during start-up. Use a switch, hub, router, and/or crossover cable to connect to this IP address via a web browser in order to reconfigure its IP settings. After entering the IP address, click on the settings tab.
1. Click the settings tab to open the page for setting the static IP address.
2. Un-check the Use DHCP box.

3. Enter the LAN IP address, router gateway and netmask. Make sure these numbers match the exact numbers for the server or router LAN. If they are not correct the DAS will not connect to the internet.

4. Press submit at the bottom of the page. If the IP address is different from the address typed into the browser window, it will not reopen. To verify the settings, please type the new static IP address into the browser window.

5. Verify the server light flashes at least once per minute.
10.0 WARRANTY – HARDWARE LIMITED WARRANTY POLICY

10.1 Warranty Start Date
“Start Date” shall mean the earlier of (a) the date that data is first reported by end user to http://www.solrenview.com or (b) 30 days after Solectria Renewables’ invoice for product.

10.2 Warranty Period
10.2.1 External SolrenView gateways
Solectria Renewables warranties gateways with SolrenView Weather monitoring for a period of one (1) year from Start Date.

10.2.2 SolrenView Weather & Weather with Wind gateways
Solectria Renewables warranties gateways with SolrenView Weather monitoring for a period of one (1) year from Start Date.

10.2.3 SolrenView 3rd Party Hardware
All 3rd party hardware, including meters, light sensor, wind direction sensor, temp sensors shall have a 1 year pass-through warranty as provided by the original equipment manufacturer.

10.3 Scope of Warranty
During the warranty period, Solectria Renewables warrants that the product shall be free from defects in materials and workmanship under normal authorized use consistent with product installation and use guides. If Solectria Renewables repairs or replaces a product, its warranty continues for the remaining portion of the original Warranty Period or 90 days from the date of the return shipment to the customer, whichever is greater. All warranties are null and void if full payment for products and associated shipping are not received in full and in a timely manner by Solectria Renewables.

Solectria Renewables will, at its option, repair or replace the defective product free of charge, provided that Solectria Renewables is notified of the product defect within the product’s Warranty Period, and provided that Solectria Renewables, through inspection, establishes the existence of such a defect and that it is covered by the Limited Warranty. Solectria Renewables will, at its option, use new and/or reconditioned parts in performing warranty repair and building replacement products. Solectria Renewables reserves the right to use parts or products of original or improved design in the repair or replacement. All replaced products and all parts removed from repaired products become the property of Solectria Renewables. Solectria Renewables will attempt to repair the unit within a reasonable time period - typically within a 20-business day...
turnaround from date of receipt of the product by Solectria Renewables. Actual delivery times may vary depending on location. Solectria Renewables does not reimburse for lost energy production.

Solectria Renewables covers both parts and labor necessary to repair the product, and return shipment to the customer via a Solectria Renewables-selected non-expedited surface freight within the contiguous United States and Canada. Alaska, Hawaii and the Rest of The World are excluded. Contact Solectria Renewables customer service for details on freight policy for return shipments outside of the contiguous United States and Canada.

10.4 Restrictions
Solectria Renewables Limited Warranties do not cover normal wear and tear of the product or costs related to the labor, installation, removal, temporary power or any other expenses in connection with repair or replacement. These warranties do not apply to and Solectria Renewables will not be responsible for any defect in or damage to:

a) The product if it has been misused, neglected, improperly installed, physically damaged or altered either internally or externally, or damage from improper use or use in an unsuitable environment;

b) The product if it has been subjected to fire, water, generalized corrosion, biological infestations, acts of God or input voltage that creates operating conditions beyond the maximum or minimum limits listed in the Solectria Renewables product specifications including high input voltage from generators and lightning strikes;

c) The product, if repairs have been performed by Solectria Renewables; unless authorized in writing by Solectria Renewables.

d) The product, if it is used as a component part of a product expressly warranted by another manufacturer;

e) The product if its original identification (trademark, serial number) markings have been defaced, altered, or removed;

f) The product if it has been damaged in shipping;

g) Any installation and operation beyond the scope covered by relevant safety regulations.

10.5 Hardware Return Procedure
If your product requires troubleshooting or warranty service, contact Solectria Renewables customer service (continued on next page).

Before returning any product directly to Solectria Renewables, you must obtain a Return Material Authorization (RMA) number and the correct factory "Ship To" address. Products must also be shipped prepaid. Product shipments will be refused and returned at your expense if they are not authorized, returned without an RMA number clearly marked on the outside of the shipping box, if they are shipped collect, or if they are shipped to the wrong location.
10.6 Service Information

10.6.1 Service Request
When you request service, Solectria Renewables will require the following information:

1) The model name and serial number of your product;
2) Information about the installation and use of the unit;
3) Information about the failure and/or reason for the return;
4) A copy of your dated proof of purchase.

10.6.2 Warranty Claim
In any warranty claim, dated proof of purchase must accompany the product and the product must not have been disassembled or modified without prior written authorization by Solectria Renewables.

Proof of purchase may be in any one of the following forms:

1) The dated purchase receipt from the original purchase of the product at point of sale to the end user, or
2) The dated merchant invoice or purchase receipt showing original equipment manufacturer (OEM) status, or
3) The dated invoice or purchase receipt showing the product exchanged under warranty.

10.6.3 Replacement Unit
Solectria Renewables will send a replacement unit if it is determined that the customer needs a replacement unit in advance of a repair of defective product (shipping cost covered by Solectria Renewables). The defective unit must be returned in the same packaging that the replacement unit was sent in.

10.6.4 Returning the Failed Unit
The failed unit MUST be returned to Solectria Renewables; it should NOT be opened or altered. The failed unit must be shipped back to Solectria Renewables via prepaid freight. If the failed unit is not received by Solectria Renewables within 30 days of customer’s receipt of a replacement unit, the customer will be required to pay for the replacement unit.

10.6.5 Shipping
Solectria Renewables will ship replacement products prepaid to customer.

Preparing the Product for Shipping:
1) Package the unit safely, preferably using the original box and packing materials. Ensure that your product is shipped fully insured in the original packaging or equivalent. This warranty will not apply where the product is damaged due to improper packaging. See section above regarding obtaining service for procedure when Solectria Renewables sends a replacement unit in advance of defective material return.

2) Include the following:
   a. The RMA number supplied by Solectria Renewables, LLC clearly marked on the outside of the box;
   b. A return address to which the unit can be shipped. Post office boxes are not acceptable;
   c. A contact telephone number where you can be reached during work;
   d. A brief description of the problem;
      Ship the unit prepaid to the address provided by your Solectria Renewables customer service representative.

Returning a product from outside of the USA or Canada:
In addition to the above, you MUST include return freight funds and are fully responsible for all documents, duties, tariffs, and deposits.

10.7 Disclaimer
SOLECTRIA RENEWABLES LIMITED WARRANTIES ARE THE SOLE AND EXCLUSIVE WARRANTY PROVIDED BY SOLECTRIA RENEWABLES IN CONNECTION WITH YOUR SOLECTRIA RENEWABLES PRODUCT AND ARE, WHERE PERMITTED BY LAW, IN LIEU OF ALL OTHER WARRANTIES, CONDITIONS, GUARANTEES, REPRESENTATIONS, OBLIGATIONS AND LIABILITIES, EXPRESS OR IMPLIED, STATUTORY OR OTHERWISE IN CONNECTION WITH THE PRODUCT, HOWEVER ARISING (WHETHER BY CONTRACT, TORT, NEGLIGENCE, PRINCIPLES OF MANUFACTURER'S LIABILITY, OPERATION OF LAW, CONDUCT, STATEMENT OR OTHERWISE), INCLUDING WITHOUT RESTRICTION ANY IMPLIED WARRANTY OR CONDITION OF QUALITY, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE TO THE EXTENT REQUIRED UNDER APPLICABLE LAW TO APPLY TO THE PRODUCT SHALL BE LIMITED IN DURATION TO THE PERIOD STIPULATED UNDER THIS LIMITED WARRANTY.

IN NO EVENT WILL SOLECTRIA RENEWABLES, LLC, INCLUDING ITS SUPPLIERS, MANUFACTURERS, VENDORS, SUBCONTRACTORS, DISTRIBUTORS, DEALERS AND ANY OTHER AFFILIATES BE LIABLE FOR ANY SPECIAL, DIRECT, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, LOSSES, COSTS OR EXPENSES HOWEVER ARISING WHETHER IN CONTRACT OR TORT INCLUDING WITHOUT RESTRICTION ANY ECONOMIC LOSSES OF ANY KIND, ANY LOSS OR DAMAGE TO PROPERTY, ANY PERSONAL INJURY, ANY DAMAGE OR INJURY ARISING FROM OR AS A RESULT OF ANY USE, MISUSE OR ABUSE, OR THE (IN-) CORRECT INSTALLATION, INTEGRATION OR OPERATION OF THE PRODUCT.
SOLECTRIA RENEWABLES NEITHER ASSUMES NOR AUTHORIZES ANY OTHER PERSON TO ASSUME FOR IT ANY OTHER LIABILITY IN CONNECTION WITH THE REPAIR OR REPLACEMENT OF THE PRODUCT.

10.8 Limitation of Liability
If your product is a consumer product, federal law does not allow an exclusion of implied warranties. To the extent you are entitled to implied warranties under federal law, to the extent permitted by applicable law they are limited to the duration of this Limited Warranty. Some states and provinces do not allow limitations or exclusions on implied warranties or on the duration of an implied warranty or on the limitation or exclusion of incidental or consequential damages, so the above limitation(s) or exclusion(s) may not apply to you. This Limited Warranty gives you specific legal rights. You may have other rights, which may vary from state to state or province to province.

WITHOUT LIMITING THE GENERALITY OF THE FOREGOING, UNLESS SPECIFICALLY AGREED TO BY IT IN WRITING, SOLECTRIA RENEWABLES
1) MAKES NO WARRANTY AS TO THE ACCURACY, SUFFICIENCY OR SUITABILITY OF ANY TECHNICAL OR OTHER INFORMATION PROVIDED IN MANUALS OR OTHER DOCUMENTATION PROVIDED BY IT IN CONNECTION WITH THE PRODUCT; AND
2) ASSUMES NO RESPONSIBILITY OR LIABILITY FOR LOSSES, DAMAGES, COSTS OR EXPENSES, WHETHER SPECIAL, DIRECT, INDIRECT, CONSEQUENTIAL OR INCIDENTAL, WHICH MIGHT ARISE OUT OF THE USE OF SUCH INFORMATION.

THE USE OF ANY SUCH INFORMATION WILL BE ENTIRELY AT THE USER’S RISK.

10.9 WARNING: LIMITATIONS ON USE
Please refer to your product user manual for limitations on uses of the product. Specifically, please note that Solectria Renewables products are not intended for use in connection with life support systems and Solectria Renewables makes no warranty or representation in connection with any use of the product for such purposes.
11.0 APPENDICES

Appendix A – SolrenView Data Sheet

Appendix B – Contact Information
Solectria Renewables LLC
360 Merrimack Street
Building 9, 2nd floor
Lawrence, Massachusetts 01843
USA

Tel: 978.683.9700
Fax: 978.683.9702
Sales/ general info: inverters@solren.com
Customer Support: service@solren.com
Website: www.solren.com

Appendix C – SolrenView™ Site Survey
In order to have enough information to customize a web site and enable data monitoring, the site survey must be filled and turned in before the data monitor is shipped. The site survey may be downloaded here: SolrenView Site Survey Please submit the survey with the purchase order for the SolrenView monitoring or email to inverters@solren.com.

Contact information
Please provide contact information in the event we have questions about the site. We will also need the site name and address. For residential installations the street address can be omitted.

Email for Event Notifications
Provide email address for notifications.

Inverter Direct, Revenue Grade and Agency Reporting
Please select options here and on the purchase order. If revenue grade please let us know the agency for the reporting.

SolrenView LAN Configuration
DHCP mode Yes or No, if NO you must provide the LAN IP address, router gateway and subnet mask.

Hardware Details
If inverters have not yet arrived, you can leave this blank. If the inverters are on site please add serial number(s).
